ARCHITECTURAL CAST STONE

*Cast Stone;  
Beautiful,  
Durable,  
Engineered  
to  
Withstand  
Midwest  
Weather*

*Tri-Stone, Inc. was born out of necessity. Our business was building fine homes and office buildings with brick.*

*When the architect called for stone trim, we found it difficult in the Midwest to find a quality cast stone manufacturer or a reliable one.*

*Since necessity is the mother of invention, here we are in the business of providing Quality, Durability and On-Time Delivery.*

*Tri-Stone, Inc. is a Midwest manufacturer of high quality architectural wet cast stone for all applications; certified tests by independent laboratories exceed the ASTM C-39 standards.*

*Better design versatility and sharper detail are among the advantages of "wet cast" components; others are: a smoother finished surface, much higher compressive strength and sheer resistance, so parts are more durable for Northern climates, and are much less prone to breakage during shipment.*

*Give us a try: e-mail drawings or photos.*

*We can build molds for practically any shape.*

*Customers, builders or architects are always welcome to stop by and see our showroom, tour our facility and and share their dreams.*

*"If you cant dream it, we cant build it".*

*Custom pieces made to your specifications • Ready on time • Manufactured in the Midwest • Available Nationally*
